UNO R3

The Arduino UNO is the best board to get started with electronics and coding. If this is your first experience tinkering with the platform, the UNO is the most robust board you can start playing with. The UNO is the most used and documented board of the whole Arduino family.

Tech Specs

Compati

Arduino UNO is a microcontroller board based on the **A** input/output pins (of which 6 can be used as PWM outp ceramic resonator, a USB connection, a power jack, an I contains everything needed to support the microcontro computer with a USB cable or power it with a AC-to-DC . You can tinker with your UNO without worrying too muc wrong, worst case scenario you can replace the chip for again.

Replaceable chip

The ATmega328P can easily be replaced, as it is not soldered to the board.

EEPROM

The ATmega328P also features 1, EEPROM, a memory which is not erased when powered off.

[Help](#)

 Battery Connector

The Arduino UNO features a barrel plug connector, that works great with a standard 9V battery.
